## Janesville Gazette kicks off new \$22 million facility

The Janesville (Wis.) Gazette Oct. 22 began producing papers on new press and postpress equipment. The Gazette went on-aidition with a Koenig Bauer AG Comet press anchoring its \$22 million plant designed by Dario Designs Inc.

In addition to the press, The Gazette moved postproduction to a 16:2 SLS3000 inserter from Muller Martini Mailroom Systems. The system is equipped with StacLinc for stacker communication control, BundLinc for monitoring and control of bundle formation, KeyLinc for the creation of key bundles and DualLinc, which enables the inserter to create two distinct zones simultaneously during newspaper inserting.

Sidney H. "Skip" Bliss, president and CEO of Bliss Communications Inc., addresses employees and managers as he stands in front of the new KBA Comet launched in October.
