

## PLANT CONSTRUCTION

### Work continues on Maryland plant

Workers examine the press tabletop at the Frederick (Md.) News-Post as work on the \$44 million plant races to completion. The building, designed by Dario Designs Inc., is being constructed around a CT4000 2-by-2 press from TKS (USA) and also features preproduction and postproduction equipment from Fusion Systems International, alfaQuest Technologies and Muller Martini Mailroom Systems Inc., among others.

News-Post editor and publisher, Myron W. Randall Jr. said the company budgeted \$36 million for the press and associated press equipment. The new TKS machine will replace a 38-year-old vintage press that permits only limited color and production capability.
