New Production and Office Facility

This 78,000 square foot facility, built on a 22 acre site, was designed to mimic the rooflines of the manufacturing plants that were once prevalent in the area. The seven-pod building is surmounted by clerestory windows and broad roofs, the slope of which carries them eight feet beyond the walls which keep the hot, high summer sun from hitting the windows, while admitting direct sunlight in winter. The vaulted ceilings provide an escape space for interior heat and the overhanging roof also holds down the cost of cooling.

Services Provided:

- Programming
- Masterplanning
- Architecture & Engineering
